Precautionary Boil-Water Advisory For Westbank of Orleans Parish

New Orleans – The Sewerage & Water Board (S&WB) has issued a precautionary boil water advisory for the Westbank of Orleans Parish due to a sudden drop in water pressure Tuesday afternoon, Jan. 23, 2018. The drop in pressure was observed at approximately 1:40 p.m..

Water pressure dropped below the acceptable level of 15 psi. This advisory will be in effect until further notice. The Eastbank of Orleans Parish is not affected by this.

Residents in the affected area are advised not to drink, make ice or brush teeth until further notice. Residents who have compromised immune systems are advised not to wash hands, shower or bathe. All other residents are advised to take the following precautions:

- Wash hands: Use soap and water, dry hands, then apply hand sanitizer. The safest option is to wash with boiled or bottled water.
- Shower or bathe: Be careful not to swallow water while showering or bathing. Use extra caution when bathing infants and young children. A sponge bath can reduce the chance of swallowing water. Though the risk of illness is minimal, individuals who have recent surgical wounds, are immunosuppressed, or have a chronic illness may want to consider using bottled or boiled water for cleansing until the advisory

is lifted. For those who want to be absolutely safe, use safe water until further notice per the Louisiana Office of Public Health.

The Sewerage & Water Board has been in contact with the Louisiana Department of Health.

Customers in other areas of the city are not affected and do not need to boil their water at this time.

The boil water advisory will remain in effect until further notice for customers in the affected area. S&WB will notify residents and businesses when the advisory is lifted. If you have any questions, please call 52WATER (529-2837).

Boil water advisories are issued out of an abundance of caution whenever the water pressure drops below 15 psi. We agree with the recommendations of our regulatory partner, the Louisiana Department of Health, that it is prudent to issue these advisories. The concern is that a pressure drop inside of a water pipe could allow contaminants into the pipe. Chlorine is a chemical that is added to water to combat contamination. The Sewerage & Water Board staff maintains a high chlorine residual and we aggressively and continually monitor our chlorine residual to ensure that our potable water has the ability to fight off bacteriological growth.

INSTRUCTIONS FOR BOILING WATER

Boil water for one full minute in a clean container. The one-minute boil time begins after the water has been brought to a rolling boil. (If there is a flat taste, it can be eliminated by shaking the water in a bottle or pouring it from one container to another.)

Please review and follow the Louisiana Office of Public Health's Recommendations for Boil-Water Advisories listed on our website at

<http://new.dhh.louisiana.gov/assets/oph/Center-PHCH/CenterCH/infectious-epi/EpiManual/BoilWaterAdvisory.pdf> or www.swbno.org to ensure that all tap water is properly disinfected before use.
